

PLM Implementation Engineer

Description

PDM Technology is an international software house that develops and implements our Bluestar PLM (Product Lifecycle Management) solution for the Microsoft Dynamics 365 / AX platform. We are looking for a PLM Implementation Engineer to join our team.

Our customers are in Europe and North America. We are located in Aalborg (DK) and have subsidiaries in Plzen (CZ), and Atlanta (USA).

Primary responsibilities

- Implementation of engineering business processes
- Implementation of product configurator
- Implementation of engineering quality management
- Installation & configuration of Bluestar PLM
- Training sessions with customers (online & on-site)
- Application support via telephone, e-mail and web
- Trouble-shooting
- Identifying customer needs relative to Bluestar PLM
- Managing implementation projects from functional scoping through go-live with support from our technical team

Additional responsibilities

Depending on your specific skills and experience your responsibilities may include:

- Pre-sales demo support/sessions
- Contributions to product development

What we can offer you

We offer a dynamic, innovative and international work environment comprised of our highly skilled colleagues who are passionate about our company, our product, and what we do for our customers. We take pride in continuously developing our skills and be a leading supplier within our field.

In your role as an Implementation Engineer, you will be able to build on your knowledge within ERP & PLM for discrete manufacturing, 3D product configuration, automatic generation of engineering data, and will become well-versed in one of the fastest growing ERP solutions – Microsoft Dynamics 365.

You will have the ability to influence our product road map by communicating customer requirements from the field directly to our R&D team.

You will be involved in international customer-facing activities from initial pre-sales through the implementation and support of Bluestar PLM. You can expect varying degrees of travel activity associated with customer projects.

You will be part of a strong and experienced team which will help you develop your skills.

Personal qualifications

- Self-starter who takes action
- Strong analytical skills
- Interest in acquiring new knowledge
- A strong team player
- Solid communication skills with customers and co-workers
- Ability to learn new technologies quickly
- Takes pride in customer satisfaction

We expect you to have an interest in/understanding of:

- ERP
- SQL
- CAD
- Quality Management
- Business Processes
